                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                      The invention describes an isolated tumour necrosis factor polypeptide

(TNF) The polypeptide and polynucleotide are useful in controlling

agriculturally important peets, particularly by modifying the growth,

feeding and/or reproduction of crop-damaging insects or insects of farm

animals. The polypeptide and polynucleotide are useful for modulating

cepithehial morphogenesis, cell-matrix adhesion in files and mammals. Thus

the polypeptide and polynucleotide may be useful for recating,

ameliorating or preventing X-linked anhidrotic (hypohidrotic) ectodermal

cysplasia and X-linked anhidrotic (hypohidrotic) ectodermal

ike disorders, e.g. sparse hair, abnormal or missing teeth or sweat

gland aberrations in animals (e.g. insects and potentially humans),

endocoxic shock, inflammation, haemorrhagic necrosis of tumours,

cytotoxicity and obesity-linked insulin resistance, all of which involve

TNF molecules. This sequence encodes the drosophila melanogaster tumour

recosis factor variant 2 (TNFv2) protein, described in the invention

factor variant 1 (TNFv1) protein, described in the invention

necrosis

The invention describes an isolated tumour necrosis factor polypeptide (TNF). The polypeptide and polynuclectide are useful in controlling agriculturally important peets, particularly by modifying the growth, feeding and/or reproduction of crop-damaging insects or insects of farm animals. The polypeptide and polynucleotide are useful for modulating the polypeptide and polynucleotide are useful for modulating the polypeptide and polynucleotide may be useful for treating, ameliorating or preventing X-linked anhidrotic (hypohidrotic) ectodermal cysplasia and X-linked anhidrotic (hypohidrotic) ectodermal dysplasia-like disorders, e.g. sparse hair, abnormal or missing teeth or sweat gland aberrations in animals (e.g. insects and potentially humans), condotoxic shock, inflammation, haemorrhagic necrosis of tumours, cycotoxicity and obesity-linked insulin resistance, all of which involve TNF molecules. This sequence encodes the drosophila melanogaster tumour

The invention describes an isolated tumour necrosis factor polypeptide (TNF). The polypeptide and polymucleotide are useful in controlling agriculturally important peets, particularly by modifying the growth, feeding and/or reproduction of crop-damaging insects or insects of farm animals. The polypeptide and polymucleotide are useful for modulating ceptchelial morphogenesis, cell-matrix adhesion in files and mammals. Thus the polypeptide and polymucleotide may be useful for treating the polypeptide and polymucleotide may be useful for treating cetodermal and x-linked anhidrotic (hypohidrotic) ectodermal dysplasial and X-linked anhidrotic (hypohidrotic) ectodermal dysplasial its disorders, e.g. sparse hair, abnormal or missing teeth or sweat gland aberrations in animals (e.g. insects and potentially humans), endocavic shock, inflammation, haemorrhagic necrosis of tumours, cytotoxicity and obseity-linked insulin resistance, all of which involve TNF molecules. This sequence encodes the drosophila melanogaster tumour necrosis factor (TNF) protein, described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            711

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  444
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        504
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 624
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    84
                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB273737-ABB22072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                 detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GACGACGACGATGCCATGCATTCCATTCCGGACGACGACGACGACGACGTTACC

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                  New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

secretion defective cell involved in the formation of secretory granules in the Zalated polypeptide involved in the formation of secretory granules in the Zalated polypeptide involved in the formation of secretion of a cell using the mucheic acid sequence spanning amino acids 243-310 of the Zie-SR protein, restoring the neuroendocrine differentiation of a cell using the nucleic acid molecule or polypeptide cited above, identifying a gene and/or protein involved in inducing regulated cell incomprising a comparison at the molecular level of a secretion-defective cell ince under conditions that restore differentiation of the secretion-defective cell ince in the absence of the conditions cited. Also included are modulating the secretory properties of a cell comprising modulating the activity and/or level of Zie-SR and an assay to comprising modulating the activity of Zia-SR, its part or derivative in a balological activity of Zia-SR, its part or derivative in assessment of a biological activity of Zia-SR, its part or derivative in selected when the biological activity of Zia-SR, its part or derivative in measurably different in the presence of the candidate compound as compared in its absence. The nucleic acid molecules or compound as compared in its absence. The nucleic acid molecules or properties of a call, for restoring or increasing the secretory properties are useful for restoring or increasing the secretory properties of function, e.g. diabetes, neurodegenerative diseases and for long term therapies to treat diseases or conditions associated with a closs of function, e.g. diabetes, neurodegenerative diseases and as a call, for requiating diseases or conditions associated with a closs of function, e.g. diabetes or secretory pathways in cells. The nucleic acid molecules can also be used to locate gene regions associated with genetic diseases. The present sequence encodes mouse Zis-SR (zinc finger spliting compounds).

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.

This invention describes a novel nucleic acid representing a synthetic Bax gene. The Bax gene of the invention is useful for identifying Bax-resistant yeast or fungi, identifying to obtaining and identifying Bax-candida spp. sequences that are differentially expressed in a pathway eventually leading to programmed cell death. The products of the invention have cytostatic, fungicide; immunosuppressive, virucide and vasctropic activity and can be used in vaccines or for gene therapy. The invention have cytostatic, fungicide; pharmaceutical compositions, antisense molecules and antibodies are useful as medicaments or in preparing a medicament for treating, preventing and/or alleviating compositions, and antibodies are useful as medicaments or in preparing a medicament for treating, preventing and/or alleviating as cancer, or for preventing apportasis in certain diseases. The compounds or polypeptides, or the genetically modified organism are useful for preparing a medicament for modifying the endogenic flora of humans and other mammals. The vaccine is useful for immunishing against yeast or funding the mammals infections. Applyons-related disease, include autoimmune disease, fundant infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      316 TTAGCAGGCAAAGAATTACCAAAAGTTTCTAAACAGTTGGAATCCATTATTGATGAAGTG 375

comprising providing a NA sequence (NA1) which encodes a polypeptide (PI), providing a NA sequence (NA1) which encodes a polypeptide (PI), providing codon altered NA sequences, each encoding 10 or a modified form of it, and recombining the codon altered NA sequences to produce a target codon altered NA which encodes a second protein. The method of the invention can be used for recombining codon-altered libraries of mucleic acids to produce new proteins, which have improvements in a desirable characteristic. Target nucleic acids include improvements in a desirable characteristic. Target nucleic acids include insulin, peptide hormones, growth factors, cytokines, interferons, interleukins, leukaemia inhibitory factor, and oncostatin M, as well as transcription and expression activators and proteins from infectious corganisms for use as vaccines. The method can also be used to produce attenuated viruses which have reduced rates of reversion to wild type.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              432

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, plasmodium falciparum. Also described are: (I) nucleotide sequences (II) and coloridation (I) and polyclonal antibody raised (1) and polyclonal antibody raised to infection. (I) and polyclonal antibody raised to immunogens comprising the sequences of (I), are useful for the development of vaccines against P. falciparum of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum infection, or they can be used to identify drug resistance in P. falciparum sequencing of the condum chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA7078 to AAA70287 and AAB18144 to AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a purified hypohidrotic ectodermal dysplasias protein (I) that promotes the development of hair follicles. (I) is a promoter of hair follicle growth and tooth growth. (I) is useful for the development of hair follicles. (I) is also useful for commercial and clinical diagnostic testing for ectodermal dysplasia (ED). (I) is also useful as a stimulant for hair and tooth growth, for stimulating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention isusful in developmental biology and in elucidaring cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ProThrSerGluThrThrAlaGluGlyGluGlyGluThrAspSer------

The invention relates to a method of increasing or decreasing one or more of hair follicle development, tooth development, or sweat gland development, in a tissue, involves altering ectodermal dysplasia (BDA1) isoform II [BDA1-II] activity in the tissue. The method is useful for increasing or decreasing hair follicle development, tooth development or sweat gland development, in a tissue of a patient suffering from an ectodermal disease such as X-linked hypohidrotic ectodermal dysplasia (KLHED), autosomal recessive hypohidrotic ectodermal dysplasia (ABD) or alopecia. The method is useful for decreasing hair follicle development in a subject suffering from hirsutism. The method is also useful for treathing breast cancer and ectopic teeth, burns and trauma of skin due to surgery. The present sequence represents DNA encoding human EDA1-II
Increasing or decreasing hair follicle development, tooth development, or sweat gland development, in a tissue, involves modulating ectodermal dysplasia protein isoform II activity in the tissue.
                                                                                                                 Example 1; Page 59-60; 102pp; English

                                                                                                                                                                                                                       The present invention describes a purified hypohidrotic ectodermal dysplasias protein (I) that promotes the development of hair follicles. (I) is a promoter of hair follicle growth and tooch growth. (I) is useful for the development of hair follicles (I) is also useful for commercial and clinical diagnostic testing for ectodermal dysplasia (ED). (I) is also useful as a stimulant for hair and tooth growth, for stimulating endocrine sweat gland development in individuals from whom the normal sweating mechanism is compromised by disease or surgery, for stimulating the growth of mammary epithelial tissue, either for reconstructing or cosmetic purposes, and for promoting or maintaining differentiation of breast epithelium. (I) is also useful for functional analysis, antibody production and patient therapy. ABL51009 to ABL51122 and ABB0908 to

The invention relates to a method of increasing or decreasing one or more of hair follicle development, tooth development, or sweat gland development, in a tissue, involves altering ectodermal dysplasia (BDA1) isoform II [BDA1-II] activity in the tissue. The method is useful for increasing or decreasing hair follicle development, tooth development or sweat gland development, in a tissue of a patient suffering from an ectodermal disease such as X-linked hypohidrotic ectodermal dysplasia (KLHED), autosomal recessive hypohidrotic ectodermal dysplasia alopecia. The method is useful for decreasing hair follicle development in a subject suffering from thirtism. The method is also useful for treating breast cancer and ectopic teeth, burns and trauma of skin due to surgery. The present sequence represents CDNA encoding human EDA1-II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -----crackcirices 441

Sequence 14, Application US/09342681C

Patent No. 6355782

GENERAL INFORMATION:
APPLICANT: Zonana et al.
TITLE OF INVENTION: Hypohydrotic ectodermal dysplasia genes and proteins
FILE REFERENCE: 52978

CURRENT APPLICATION NUMBER: US/09/342,681C

CURRENT FILING DATE: 1998-06-29

PRIOR PILING DATE: 1998-07-09

PRIOR PILING DATE: 1998-12-15

NUMBER OF SEC ID NOS: 123

SOFTWARE: PatentIn Ver. 2.1

SEQ ID NO 14

LENGTH: 1176
